

The pros of the psg parse are that it visually represents the relationships in a tree which is easy to see and shows noun and verb phrases. The cons are that it is limited and does not show the dependencies between words. The pros of the dependency parse is that it builds a tree with the tags used determining the relationship between words rather than using grammar rules. The cons are that it can be ambiguous and there can be multiple parsings for the same sentence. The pros of the srl parse is that it focuses on how the words relate to the verb in the sentence and can help distinguish words as modifiers and agents. The cons are that it is hard to create a standard set of arguments for all verbs.
